Fire

Myths

Myth: It is normal for children to play with fire.
Fact: NO! In fact, it is dangerous behavior that causes burns and property loss.

Myth: Firesetting is a phase that all children go through.
Fact: It is not a phase. It is a behavior that must be dealt with, or it will continue.

Myth: If the fire is small, then it is not a problem.
Fact: All fires spread and get out of control quickly.

Myth: Children start fires because they are pyromaniacs.
Fact: Almost every child has a problem and curiosity about fire. But the problem and curiosity may be a symptom of a more wide-spread problem.

Myth: Some children are naturally curious about fire.
Fact: Curiosity about fire is a normal part of childhood development.

Myth: There are many reasons why children set fires.
Fact: Curiosity, anger, and a need for attention are common reasons.

Myth: Children who set fires are dangerous.
Fact: Most children who set fires are not dangerous and can be helped.

Myth: Fire setting is a sign of mental illness.
Fact: Fire setting is a behavior, not a mental illness.

Myth: Fire setting is a phase that all children go through.
Fact: It is not a phase. It is a behavior that must be dealt with, or it will continue.

Myth: Fire setting is a sign of mental illness.
Fact: Fire setting is a behavior, not a mental illness.
